SUMMARY

Fullstack developer with 5+ years in web development, 3+ of them in product teams. I build products end to end: React/Next.js frontends, Node.js and Go backends, PostgreSQL, Redis queues, Docker and CI. Now I work on the backend and dashboard of an AI video-analytics startup and on my own TypeScript product (Telegram bot + Next.js). Before that, as Frontend Lead, I built a B2B platform's web client from scratch against a Java Spring API.

SKILLS

Frontend: React, Next.js (App Router), TypeScript, Redux Toolkit, TanStack Query, Zustand, Tailwind CSS, Ant Design
Backend: Node.js, NestJS, Go (Gin; working knowledge), REST, WebSocket, MQTT, Telegram bots (Telegraf)
Data & security: PostgreSQL (migrations, pgvector), Redis, BullMQ, MongoDB; JWT, RBAC, CSRF protection, rate limiting
DevOps & quality: Docker Compose, GitHub Actions, Linux, systemd, Caddy, Prometheus, Sentry, OpenTelemetry, Vitest, Playwright, Claude Code

EXPERIENCE

Polyframe AI **Apr 2026 – Present**
Fullstack Engineer · AI video analytics for retail and offices (startup) · Tashkent

- Build backend features in Go (Gin, pgx, PostgreSQL, MQTT, WebSocket) and the React/TypeScript dashboard: zone occupancy, staff attendance, alerts, reports.
- Made the dashboard and the alert engine use one shared headcount, so both always show the same number; the live view query went from seconds to milliseconds.
- Fixed metric calculation bugs and added regression tests on a real PostgreSQL (testcontainers) to keep them fixed.
- Built operations tooling for on-premise servers: health watchdog with Telegram alerts, disk-space guard, scheduled backups (Docker Compose, systemd, Bash).
- Made Telegram alerts reliable (rate limits, retries with backoff, dead-channel cleanup); added scheduled PDF reports.

Tischerco (Germany) — “It's Done” platform **Apr 2024 – Dec 2025**
Frontend Lead · B2B platform for service companies · remote

- Built the 30+ screen web client from scratch (React, TypeScript, Redux Toolkit, Ant Design) and owned its architecture.
- Integrated the Java Spring REST API and agreed contracts with backend developers: JWT access/refresh tokens, role-based access, subscription plans.
- Delivered work reports with photos and e-signatures, invoices and offers generated from reports (with VAT), PDF preview, Google Maps address search; UI in German, English and Russian.

vakhid.digital **Feb 2023 – Mar 2024**
Frontend Developer · web studio with an in-house logistics CRM · Tashkent

- Developed modules of the in-house freight logistics CRM (React, TypeScript, Redux Toolkit, REST API); moved existing JavaScript modules to TypeScript.
- Built corporate sites and landing pages for studio clients.

Freelance **Apr 2020 – Nov 2022**
Web Developer

- Built 50+ websites and web apps: online stores, landing pages, admin panels (React, Next.js, PHP, WordPress).
- Wrote backends on Node.js/NestJS: JWT/Passport auth, role guards, aggregation queries, file uploads, Telegram bots.

PROJECTS

Taom — food price comparison for Tashkent (own product, pre-launch) **Apr 2026 – Present**

- Telegram bot with a Mini App and a Next.js 15 / React 19 web app that compare dish prices and delivery fees across delivery services; Russian, Uzbek and English UI.
- TypeScript backend: PostgreSQL with raw SQL and 60+ migrations, Redis + BullMQ workers, LISTEN/NOTIFY between bot and worker, Zod validation, LLM features via OpenRouter.
- Telegram Login and Mini App auth, JWT sessions, CSRF protection, rate limiting; 1,900+ unit tests (Vitest), Playwright, GitHub Actions with Semgrep and gitleaks, Docker.

EDUCATION & LANGUAGES

Bachelor of Applied Informatics — Russian-Tajik (Slavonic) University, Dushanbe · 2021
Languages: Russian — fluent · English — B2 · Tajik — native · Persian — fluent · Uzbek — basic
