SUMMARY

Frontend developer with 6+ years in web development, 3+ in product teams, comfortable on the backend too (Node.js, Go, PostgreSQL). As Frontend Lead Developer at Tischerco (Germany), I built a 30+ screen B2B web app from scratch. At Polyframe AI I build the web UI and Go backend of a video-analytics system. Earlier, I ran my own team, HM-TECH, for 2.5 years.

SKILLS

Languages: TypeScript, JavaScript (ES6+), Go, SQL, HTML5, CSS3
Frontend: React, Next.js (SSR), Redux Toolkit, TanStack Query, Zustand, React Hook Form, Tailwind CSS, Ant Design, SCSS
Backend: Node.js, NestJS, Go (Gin), REST APIs, GraphQL, WebSocket, MQTT, Telegram Bot API, LLM APIs
Databases & queues: PostgreSQL, Redis, BullMQ, MongoDB
Testing: Jest, React Testing Library, Vitest, Playwright, Testcontainers
Tooling & DevOps: Git, Vite, Webpack, Docker, GitHub Actions (CI/CD), Linux, Figma
Practices: code review, Scrum, estimation and planning, AI-assisted development

EXPERIENCE

Polyframe AI — **Apr 2026 – Present**
Fullstack Engineer · AI video analytics for retail and offices · Tashkent

- Develop the web UI on React 19, TypeScript, TanStack Query, Zustand and Tailwind: live zone occupancy, staff attendance, alerts, reports and playback of annotated video clips (HLS).
- Made camera-frame zones editable (draggable polygon vertices, undo, snapping) and added an entrance-line editor.
- Fixed a mismatch between the live screen and alerts (10 people on screen, 13 in the alert) by removing a duplicate SQL calculation and moving the screen to the shared data source; query time fell from 2.2 s to ~10 ms (measured on the test stand).
- Took part in an audit of 225 analytics blocks and fixed metric bugs, including visitor counts inflated several-fold (tracks were counted instead of people in frame); locked the fixes in with PostgreSQL tests (Testcontainers).
- In Go (Gin, pgx, PostgreSQL, MQTT): Telegram alert delivery within API rate limits with retries, scheduled PDF reports (Gotenberg), a health watchdog and disk guard for on-premise servers.
- Prepared onboarding for new developers (project guide, Definition of Done, PR template) and set up an AI-assisted workflow with implementer and reviewer roles.

Tischerco (Germany) — “It's Done” platform — **Apr 2024 – Dec 2025**
Frontend Lead Developer · B2B platform for service companies · remote

- Built a 30+ screen web app from scratch (React, TypeScript, Vite, Redux Toolkit, Ant Design): chose the stack, set the project structure and code standards.
- Delivered the core flows: companies and sites, work reports with photos and e-signatures, invoices and quotes with VAT, PDF preview.
- Integrated the Java Spring REST API and agreed API contracts with the backend: JWT (access/refresh), role-based access, subscription plans.
- Complex forms on React Hook Form + Yup, Google Maps address search, localization into German, English and Russian (i18next); optimized long-list rendering.
- Estimated and planned frontend work in a 6-person Scrum team with backend, design and QA.

vakhid.digital — **Feb 2023 – Mar 2024**
Frontend Developer · web studio with an in-house logistics CRM · Tashkent

- Developed and maintained modules of the freight logistics CRM (React, TypeScript, Redux Toolkit, REST API); migrated JavaScript modules to TypeScript.
- Built responsive, cross-browser corporate websites and landing pages for studio clients.

HM-TECH — own web development team — **Apr 2020 – Nov 2022**
Founder & Team Lead · up to 14 people: frontend, backend, design, QA, SEO

- Built and led a distributed team: staffing projects, assigning tasks, tracking deadlines, reviewing code.
- Ran projects from the first call to handover: requirements and specs, time and cost estimates, client communication.
- Delivered 50+ projects: online stores, corporate websites, landing pages, admin panels (React, Next.js, NestJS, PHP, WordPress).
- Wrote frontend and backend (Node.js/NestJS) myself: React SPAs, JWT/Passport auth, role-based access, Telegram bots.

PROJECTS

Taom — food delivery price comparison (own product, pre-launch) — **Apr 2026 – Present**

- Designed and built solo: a Telegram bot with a Mini App, a Next.js 15 web app (App Router, SSR) and background workers in one TypeScript monorepo; UI in 3 languages.
- Backend: PostgreSQL with raw SQL (60+ migrations), a Redis + BullMQ job queue with retries, dead-lettering and a circuit breaker, Zod validation, LLMs via OpenRouter with model fallback.
- Performance and quality: home page p95 under load cut from 109 s to 1.5 s (local load test); 1,900+ unit tests (Vitest), e2e (Playwright), CI with SAST (Semgrep).

EDUCATION & LANGUAGES

Bachelor of Applied Informatics — Russian-Tajik (Slavonic) University, Dushanbe · 2021
Languages: Russian — fluent · English — B2 · Tajik — native · Persian — fluent · Uzbek — basic
